SIGNAGE

FREE-STANDING VINYL SIGNS

PVC or vinyl billboard signs are the preferred option for large outdoor signage solutions, with prints that have no size limit and are waterproof and durable. The Vinyl print is applied, installed or stretched onto the frame structure in various different ways, depending on the actual or specific requirements.

The amount of upright poles and supporting stays are calculated based on the size of the billboard sign as well as the area or location where the sign needs to be installed. Our experienced and professional sales team will advise you on the best solution for your needs.

FREE-STANDING ALUMINIUM SIGNS

We custom manufacture freestanding aluminium signage to your requirements and these are often used for directional and other business signage solutions. Aluminium signage boards can be cut to shape, to create something different to your standard square or rectangular signs. Vinyl prints or cut out elements can be applied or for something really special we can mount aluminium cut out letters to the backing board to create a 3D effect or look. The poles and frames are made from steel square tubing and sprayed to your required colour or pantone. Anodised or brushed ACM (Dibond) signage boards are then mounted to the structure.

CORREX SIGNAGE BOARDS

Favoured by industry for its lightweight structure and competitive pricing. Excellent chemical and good fatigue resistance. It is ideal for affordable way finding signage.

Correx board is widely used in the property selling and letting markets as estate agent boards.

Correx is light, rigid and very cost effective. Ideal for many kinds of sign display and advertising applications.

PERSPEX ACRYLIC SIGNAGE

Perspex signs are mostly used for indoor applications and are generally supplied with a full colour vinyl print or vinyl cut out elements. Raised Perspex or aluminium cut out letters can be used to enhance the look of the sign.

We make use of 3mm or 5mm clear or coloured perspex, depending on the size of the required perspex or acrylic sign. We then mount these signs via aluminium barrel spacers to create the 3D or raised effect.

PARKING & DIRECTIONAL SIGNS

Parking, directional or way finding pole signs are generally made from steel square tubing and have either a metal/chromadek or aluminium fascia including a full colour vinyl print or vinyl cut out elements.

These ground or pole signs are durable and can be made single or double sided. Our installation teams will help install these freestanding signs with sturdy cement bases, below ground.

METAL OR CHROMADEK POLE SIGNS

We custom manufacture affordable freestanding signs, ground signs or pole signs with chromadek metal panels or sheets, based on your specific requirements, single sided, double sided or custom designs.

From basic parking signs, directional or way-finding signs to large construction and warning signs. These structures are sprayed to your required colour and vinyl prints are applied to the chromadek sheeting.

ALUMINIUM BUSINESS SIGNAGE

We offer a variety of aluminium signage solutions including individual cut out letters & logos, backing board signs and reverse cut outs, ideal for both indoor and outdoor signage solutions.

These aluminium business signs can be supplied or manufactured from anodised aluminium, brushed ACM (Dibond) or professionally sprayed to your specific pantone requirements.

PERSPEX VINYL SIGNS

Custom perspex acrylic signage boards are generally supplied with a full colour vinyl print or vinyl cut-out graphics applied to a 3mm or 5mm clear or coloured perspex sheet.

Raised perspex or aluminium cut-out letters can be used to enhance the look of the sign and are mounted flush or via 5mm spacers, to create the 3D effect.

We then mount these perspex sign boards via aluminium barrel spacers to create the raised or floating effect.

PERSPEX WITH FROSTED VINYL SIGNS

Custom perspex acrylic signage boards with a frosted vinyl applied to a 3mm or 5mm clear or coloured perspex sheet.

We then mount these perspex sign boards via aluminium barrel spacers to create the raised or floating effect.

REVERSE CUT ALUMINIUM SIGNS

Our reverse cut aluminium signs are ideal for both indoor and outdoor use — from house numbers to office reception signs. We CNC cut your logo or lettering *into* the metal panel, removing the design instead of raising it, to create a striking and professional cut-out effect.

These signs are finished in brushed or anodised aluminium. Mounted with stainless steel pins or aluminium barrel spacers, reverse cut signs float off the wall to deliver an eye-catching, dimensional look that sets your brand apart.

PORTABLE / MOVEABLE SIGNS

We custom manufacture portable or moveable signs based on your specific requirements.

These signs are ideal for both the office or retail sector and specifically where a sign needs to be moved around or brought in at night or when the business is closed.

We manufacture these signs in either steel or aluminium and we have numerous options for the branding elements, from replaceable posters to vinyl prints.
